SUMMARY

A Data Engineer with 3+ years building scalable data pipelines within fintech industry

PROFESSIONAL EXPERIENCE

Hytech Consulting

Kuala Lumpur, Malaysia

Data Engineer

Sep 2025 – Present

- Designed and maintained production grade Databricks data pipelines following Medallion Architecture, processing 50M+ client records, which supports downstream reporting payment fraud analysis, KYC, and client account analytics
- Built Python-based ingestion frameworks for multiple sources (REST APIs, flat files) into Delta Lake, implementing incremental loading strategies and partition pruning that reduced processing time by 40%
- Architected Databricks Gold-layer aggregation pipeline using PySpark, scheduled via Databricks Workflows, compressing 5M+ Silver-layer rows into 7,000+ pre-aggregated rows, reducing Power BI file size 99%, refresh time 87%
- Performed data reconciliation, duplicate detection, null validation, and transformation verification across Medallion layers to maintain data integrity and reporting accuracy
- Optimized Delta Lake tables using Z-Ordering on frequently queried columns (e.g., user_id, mt4_account), reducing unnecessary large volume data scans and enabling faster retrieval from multi-million-row datasets
- Developed an automated Databricks monitoring pipeline that analyzed daily withdrawal auto-approval rates across seven trading brands and delivered threshold-based alerts to Lark via webhooks
- 1st Place - Malaysia Office; 3rd Place - Global Offices — Hytech AI Innovation Competition (team of 6), building an AI-powered reporting solution integrating database KPI analysis with Claude Enterprise to automate analytical insights.

Turnkey Consulting

Kuala Lumpur, Malaysia

Data Analyst

May 2024 – Feb 2025

- Designed and deployed end to end automated ETL pipelines using Stitch to extract data from the HubSpot API, replicate and transform datasets, and load 1M+ records across 20+ Big Query tables, reducing weekly manual processing by 90%
- Owned and managed the GCP/BigQuery data platform, implementing data-quality and governance practices across 20+ tables to maintain standardized, reliable datasets for downstream analytics.
- Developed Python-based data-quality automation to validate 100K+ records weekly, detecting anomalies such as outdated deals, missing SOW/PO records, and incomplete client information.
- Developed advanced SQL transformations using JOINS, CTEs and window functions to integrate and prepare datasets for downstream BI and analytical workloads.
- Designed and maintained Power BI reporting solutions across North America, Europe and APAC, supporting 30+ business stakeholders with standardized datasets and automated reporting.
- Partnered with regional stakeholders to define data requirements, resolve data-quality issues, and improve the reliability of sales and marketing data products.

Swap Asia

Kuala Lumpur, Malaysia

Data Analyst

May 2023 – May 2024

- Developed Python-based ETL pipelines using Apache Airflow to automate the ingestion of daily updated flat files into a centralized MySQL database, scheduled after daily operational updates to maintain current and historical records.
- Implemented pipeline validation and error handling to detect schema and data-quality issues (e.g. changed column names, incompatible data types, inconsistent date formats), with Airflow retries and failure alerts
- Developed and maintained Power BI dashboards for monthly management reviews, senior management, contributed to an 8.4% increase in revenue in the device protection category
- Reconciled 450K+ device protection records between Maxis and Swap Asia, validating IMEI, SKU, device tier, pricing and customer information to ensure data integrity and accurate customer eligibility for claim processing.

PERSONAL PROJECTS

github.com/cheahcq99

2026

- Built end-to-end pipeline (Python, Airflow, dbt, Postgres) implementing Bronze/Silver/Gold medallion architecture, containerized with Docker and git as version control

More projects: [GitHub Repositories](#)

TECHNICAL SKILLS

Languages & Databases: Python, SQL, DAX, M (Power Query), MySQL, BigQuery, PostgreSQL, Linux (Bash)

Big Data & ETL: Databricks, PySpark, Delta Lake, Medallion Architecture, Apache Airflow, dbt, Stitch, Docker

BI & Automation: Power BI, Git, REST APIs, Postman, GitHub

EDUCATION

Universiti Tunku Abdul Rahman

Bachelor in Business Information Systems, Information Technology

Perak, Malaysia

Graduation Date: March 2023

Universiti Tunku Abdul Rahman

Foundation in Accountancy and Management

Perak, Malaysia

Graduation Date: September 2018

Certifications: HackerRank SQL (Intermediate) | AWS Fundamentals Specialization (Coursera)
